

FlowDrive Public Release

The fluid interface represents a profound reimaging of the driving experience, where technology recedes into the background, allowing the relationship between driver and vehicle to feel effortless and intuitive.

This harmonious integration of design and engineering creates an experience that is both beautifully simple and profoundly personal, transforming the act of driving into something instinctive and extraordinary.

Recognitions

FlowDrive was featured in major press outlets in 2022 and continued to be the key interface enabling self-driving on existing vehicle platforms.

MotorTrend Exclusive Article, December 2022

"This is an interesting, core concept of Ghost's vision for this system: It's not something you enable and disable. Like a ghost, it's just sort of invisibly watching and waiting ... The car is always thinking about doing the perfect drive, and if you're in control, you're in control. "

Directly related to the implementation of FlowDrive, my team and I were awarded with 4 patents related to our inventions.
